Summary

Computer Science undergraduate at MMMUT (9.14/10.0 CGPA) specializing in LLM engineering, with hands-on experience building web-based RAG applications with context management using LangChain and Groq. Skilled in developing ML systems and backend APIs, and deploying them with FastAPI, Docker, and AWS. Solved 1100+ DSA problems.

Education

Madan Mohan Malaviya University of Technology (MMMUT) — Gorakhpur, Uttar Pradesh
B.Tech. in Computer Science and Engineering – CGPA: 9.14/10.0 — 2024 – 2028
Class XII – Y.P.T.R.M.M. Public School, Gorakhpur, Uttar Pradesh – 83.2% — 2024
Class X – Janta Inter College, Deoria,Uttar Pradesh – 91.4% — 2022

Experience

Artificial Intelligence Summer Trainee — June 2026 – July 2026
Madan Mohan Malaviya University of Technology (MMMUT) – Certificate — *Gorakhpur, Uttar Pradesh*

- Completed a six-week Artificial Intelligence training program covering Machine Learning, Deep Learning, and Natural Language Processing (NLP) through hands-on, application-oriented exercises.
- Applied Generative AI and Large Language Model (LLM) concepts to build AI-powered applications.

Projects

Network Security – Phishing Detection | *Python, scikit-learn, FastAPI, MongoDB, Docker, AWS, NumPy, Pandas*
GitHub | Demo Video

- Engineered end-to-end ML pipeline for phishing website detection, covering data ingestion, validation, preprocessing, and feature engineering.
- Benchmarked 5 supervised classifiers with hyperparameter tuning; best model achieved 97.65% F1-score, 97.26% precision, and 98.05% recall.
- Deployed model as a Dockerized FastAPI REST API on AWS (S3, ECR, EC2) with GitHub Actions CI/CD; integrated MongoDB Atlas for data storage and MLflow/DagsHub for experiment tracking.

DevTinder – Developer Networking Platform | *Node.js, Express.js, MongoDB, JWT*
GitHub | Live Demo

- Developed RESTful backend APIs for user registration, profile management, and developer connection requests using Node.js and Express.js.
- Secured user workflows with JWT-based authentication, bcrypt password hashing, and request validation.
- Designed MongoDB schemas for user profiles and connection requests, with indexed queries for efficient lookups.

Quorum – Role-Based AI Research System | *Python, LangChain, Tavily, BeautifulSoup, Groq, Streamlit*
GitHub | Live Demo

- Built a web-based RAG research system that retrieves sources with Tavily, extracts page content, and generates structured, source-linked reports using Groq LLMs.
- Synthesized up to 3 sources into evidence-based findings, comparisons, and conclusions in a single LLM request.
- Implemented token-aware context management with an estimated 7,500-token request budget, 60-second cooldown, and manual retry to handle API rate limits.

Achievements

- Winner of TechSprint – GDG Hackathon 2025.
- Solved 1100+ Data Structures and Algorithms problems across coding platforms.
- Achieved 1600+ LeetCode contest rating and 1400+ CodeChef contest rating.
- Secured 2nd rank in Codigo, a coding contest organized by the Computer Engineering Society, MMMUT.

Technical Skills

AI/LLM Engineering: Large Language Models (LLMs), RAG, LangChain, LangGraph
Machine Learning & Deep Learning: ANNs, CNNs, RNNs, TensorFlow, Encoder–Decoder, Seq2Seq, scikit-learn, XGBoost, MLflow, NumPy, Pandas, DagsHub
Languages: Python, Java, JavaScript, C, SQL
Backend & Databases: FastAPI, Node.js, Express.js, MySQL, MongoDB
Cloud & Tools: AWS (S3, EC2, ECR), Docker, GitHub, Microsoft Azure, Postman
Core CS: Data Structures & Algorithms, Object-Oriented Programming, Database Management Systems, Operating Systems, Computer Networks
